

## BIKE RACK BARRIER

Effective, modular crowd control starts here — our Bike Rack Barrier is designed for fast deployment, versatility, and rugged event environments. Great for queue lines, pedestrian flow control, and staging perimeters.

**SKU:** 1012219.00 | **Categories:** [Crowd Control & Fencing Solutions](#), [Crowd Control Barriers](#)

## PRODUCT DESCRIPTION

Our **Bike Rack Barriers** are a trusted solution in event logistics, built to balance portability and strength. Constructed with galvanised steel tubing and welded joints, this barrier panel is engineered to connect to adjacent units through a secure interlocking system for consistent alignment and stability.

It is widely used in concerts, festivals, community events, and public gatherings to guide crowds, delineate spaces, and prevent line bleed. The barrier's open-bar vertical design allows visibility through the structure for safety and monitoring, while its sturdy frame handles moderate crowd pressure.

We offer optional feet types (flat feet, bridge feet) depending on the ground surface and deployment scenario. We also integrate covers, signage or branding wraps as an optional add-on for your event.

### Key features of Bike Rack Barriers:

- Galvanised steel frame for weather resistance
- Welded construction for durability
- Interlocking ends for modular layout (male/female style)
- Vertical bar infill for visibility & safety
- Removable or foldable feet options
- Lightweight enough for crew handling, yet sturdy under crowd load
- Suitable for queue lines, temporary perimeters, buffer zones

### Ideal applications

- Entrance & queue management at festivals, concerts, markets
- Pedestrian pathways / crowd flow control
- Temporary staging buffer in front of stages or performance zones
- Restricted access zones or backstage perimeters
- Signage or branding panels (barrier covers)

## TECHNICAL SPECS

**Length** ~2.2 m

**Height** ~1.1 m

**Material** Galvanised carbon steel tubing

**Connection** Interlocking male/female ends (hook or loop style)

**Finish** Hot-dip galvanised (weather resistant)
