

POLICE-STYLE PEDESTRIAN BARRIER

The Police-Style Pedestrian Barrier provides a sturdy, interlocking crowd control solution for managing queues, access points, and public areas at large events, festivals, and venues.

SKU: 1000026.00 | **Categories:** [Crowd Control & Fencing Solutions](#), [Crowd Control Barriers](#)

PRODUCT DESCRIPTION

The Police-Style Pedestrian Barrier is a durable, interlocking steel barrier designed for reliable crowd management at festivals, stadiums, and public events. Originally developed for police and civic use, these barriers provide greater strength and stability than standard bike rack barriers — making them ideal for managing entry lanes, securing restricted areas, and guiding large crowds safely and efficiently.

Each barrier connects securely using a hook-and-eye interlock system, forming continuous lines that remain stable even under pressure. The integrated footplate faces the public side to add support through the natural weight of the crowd, while the lightweight steel construction (approx. 31 kg per panel) ensures fast installation, repositioning, and pack-down.

Perfect for entry gates, FOH lines, or controlled access corridors, these police-style barriers are trusted for events that require professional crowd control without the need for full MOJO front-of-stage barricades. Optional barrier covers are available for a cleaner presentation or to add event and sponsor branding.

Key Features of the Police-Style Pedestrian Barrier:

- Heavy-Duty Construction – Rigid welded steel frame for enhanced stability and durability
- Interlocking Design – Hook-and-eye connection creates secure, continuous lines
- Stable Footplate – Faces the crowd for added strength and pressure absorption
- Lightweight & Efficient – Approx. 31 kg per barrier; easy to transport and install
- Tool-Free Assembly – Fast setup and repositioning by small crews
- Branding Options – Barrier covers available for indoor or high-profile events
- Compact Storage – Stackable design for efficient handling and transport

Ideal Applications:

- Entry and exit control at festivals, concerts, and sporting events
- Queue management for venues, ticketing zones, and merchandise areas
- Access corridors for emergency or security personnel
- Perimeter control for public gatherings and parades
- Backstage and service lane protection
- Temporary road closures or controlled access points
