

BRUSH FENCE

Brush Fence panels offer a natural, decorative way to screen event areas, providing privacy and wind buffering with an organic finish that complements outdoor spaces.

SKU: 1012216.00 | **Categories:** [Crowd Control & Fencing Solutions](#), [Event Fencing](#)

PRODUCT DESCRIPTION

The **Brush Fence Panel** blends function and form by combining a timber or aluminium frame with densely bound natural brushwood infill. While not intended for high crowd control, these panels deliver effective visual separation, wind buffering, and striking aesthetics. The panels interlock to form continuous lines, and can be used in conjunction with crowd control barriers or standalone as decorative walls.

These panels are perfect for backstage visual screening, outdoor lounge zones, dressing room surrounds, marquee backdrop walls, or any event space needing a natural or rustic accent. Their porous structure allows airflow while obscuring the view behind, making them ideal for semi-visible concealment without fully blocking air movement. Unlike mesh or fabric screens, brush fencing offers a more organic texture and finish.

Key Features of the Brush Fence Panels:

- Dense brushwood infill for partial visual screening
- Decorative, natural aesthetic suited to boutique and themed events
- Modular panel design for flexible layouts
- Compatible with support frames and barrier systems
- Lightweight, transportable, and easy to install
- Good wind tolerance (but less structural strength than steel fences)
- Allows airflow while softening hard edges

Ideal Applications:

- Behind bars, kitchens, service areas
- Behind marquees for aesthetic screening
- VIP or lounge zones needing privacy
- Dressing rooms or green rooms
- Rustic weddings, garden events, outdoor activations
- Hiding infrastructure (cable runs, generators) from view

TECHNICAL SPECS

Height ~2.1 m

Width ~1.2 m panel

Frame Material Timber or aluminium support

Infill Material North America Natural brushwood / dried reeds / twigs

Connection Bracket or interlock systems compatible with barrier frames or posts

Wind tolerance Suitable for moderate wind loads (but not heavy crowd pressure)
