

MOJO HIGH FENCE STRAIGHT, BLACK, WHITE & TRANSPARENT

Add height, privacy, and control to your barricade line with the **MOJO High Fence Straight**. Available in **black** (multiplex) or **transparent** (polycarbonate), this unit extends standard MOJO barriers to create secure, sight-blocked or see-through perimeters for backstage, VIP and restricted zones.

SKU: N/A | **Categories:** [MOJO Barriers](#)

PRODUCT DESCRIPTION

The **MOJO High Fence Straight** is a pressure-rated extension for the MOJO barricade system, designed for events that need extra height and clearer separation between public and restricted areas. At approx. **2.4 m** tall, the fence section mounts to MOJO Straight Barriers to form a continuous, rigid wall.

Choose the finish to suit your site:

- **Black Multiplex:** creates a full **sightline block** ("kill") for VIP compounds, back-of-house, and sensitive build zones.
- **Transparent Polycarbonate:** maintains **clear visibility** for security teams while preserving the same structural integrity.

Each panel uses the familiar **interlocking nose-plug** system for fast install and alignment, and integrates with MOJO **Mega Exit Gates, doors and corners** for planned entry/exit points. Built for touring and stadium use, the High Fence delivers a cleaner, more professional look than temporary mesh fencing while handling high crowd pressure.

Key features of the MOJO High Fence Straight:

- **Extra Height & Control** – Extends your MOJO line to ~2.4 m for secure perimeters.
- **Three Finishes** – Black **multiplex** for privacy; **transparent polycarbonate** for visibility.
- **Strong & Event-Ready** – Engineered to withstand crowd pressure; durable, reusable components.
- **Fast Installation** – Mounts to MOJO Straights with the standard interlocking connection.
- **Integrated Access** – Compatible with MOJO Mega Exit Gates, doors and corners.
- **Cleaner Aesthetics** – A premium alternative to mobile/mesh fencing.
- **Site Friendly** – Can span road crossings and adapt to split-level pavements.

Ideal applications:

- **Backstage, BOH & VIP compounds** – Hide production areas, create secure zones.
- **Stadiums & Festivals** – High-traffic sites needing tall, tamper-resistant perimeters.
- **Broadcast & Touring** – Low-glare black or neutral white; transparent panels for line-of-sight security.
- **Event logistics** – Define service lanes and controlled access without visual clutter.
