

## TEMPORARY FENCE PANEL

Secure your event perimeter with our MOJO Temporary Fence Panels — modular, durable, and ideal for crowd control at festivals, concerts, and outdoor activations.

**SKU:** 1012092.00 | **Categories:** [Crowd Control & Fencing Solutions](#), [Temporary Fencing](#)

## PRODUCT DESCRIPTION

Our **MOJO Temporary Fence Panels** are built from galvanised steel tubing with welded mesh infill, designed to interlock and form continuous barriers. Commonly used for secure perimeters, restricted zones, or event back-of-house areas, these panels balance strength, visibility, and ease of setup.

They're engineered to withstand typical crowd pressure, wind loads, and site demands. For high-wind areas, additional bracing or wind mesh can be added. Panels may come with bases, clamps, and braces to maintain stability on grass, asphalt, or uneven ground.

### Key features

- Galvanised steel frame + welded wire mesh infill
- Interlocking design for modular layout
- Optional bracing and base weights for stability
- Open-mesh structure allows visibility while controlling foot access
- Suitable for in/out corridor setups, perimeter control, and restricted zones
- Easy to install and dismantle
- Optional wind mesh or privacy screening
- Complies (or can be upgraded to comply) with Australian safety standards

### Ideal applications

- Event perimeters & external boundaries
- Backstage or BOH separation
- Queue or entrance line fencing
- Service or delivery zones
- Restricted access or staff-only areas
- Screening for power, sound, AV, or rigging zones

## TECHNICAL SPECS

**Width** ~2.4 m

**Height** ~2.1 m

**Material** Hot-dipped galvanised steel

**Connection** Panel clamps

**Base/Support** Concrete, rubber, or weighted base blocks

**Wind load handling**

Standard; upgradable with bracing for higher wind zones
